

We are excited to provide our patients with a highly advanced digital retinal screening technology which allows our doctors to view the largest area of your retina in one panoramic image without the use of dilation drops.

Dilated Exam

- Blurred near vision for 4-6 hours (ie: you will not be able to see your cell phone.)
- Light sensitivity for 4-6 hours
- Doctor will verbally discuss their findings after observing the retina.

The OPTOMAP Retinal Exam:

- No blurred vision
- No light sensitivity
- Digital image stored for future comparison
- The opportunity for you to view and discuss the OPTOMAP images with your doctor at the time of your visit.
- A larger overview or map of the retina that gives the doctor a more detailed view that cannot be achieved by other means.

We strongly recommend and encourage all patients to have the OPTOMAP Retinal Exam as an essential part of your comprehensive eye exam. There is an additional fee of \$39.00 for this exam. This procedure will not be covered by insurance, but is generally a reimbursable flexible spending (FSA) expense.

I **elect** to have the OPTOMAP Retinal Exam today.

I **decline** the Optomap Retinal Exam and prefer to be dilated.
